

On Demand Solutions for IT

To maximize the value of IT, many companies are looking to options that will leverage their IT systems to gain competitive advantage and reduce costs. These companies are also looking to improve system performance, uptime and system management. Meritide's On Demand delivery options offer solutions tailored to your business that address your specific needs with the approach that makes the most sense for your organization.

Managed Services

Managed Services provide an option for customers who may already own or want to purchase an application to reside on their own infrastructure but find that the administration is too costly or time consuming. Meritide uses the same best practices to manage your applications that are used in our SaaS offerings and reduces the total cost to the customer by leveraging economies of scale. We invest in training and development of the consultants that manage these systems and use their skills across multiple installations. Meritide works with our customers to layout a flexible Annual Administration Plan to meet support, administration and customization needs.

On Demand

On Demand Services provide a means for the customer to leverage Meritide's capabilities on an as-needed basis. These offerings are packaged service engagements for defined activities.

Software as a Service

Software as a Service (SaaS) offers an attractive option to customers who want the capabilities of enterprise software without the capital investment. Meritide delivers the full functionality of industry leading software. Meritide handles all system administration, eliminating the need for the customer to provide staff to administer and support the application. You also benefit from reduced investment in hardware and in-house support costs. Support comes directly from Meritide – people that know your business, your application and your needs. We provide a full solution to meet your needs – not just components of it.

Why Meritide?

Competence. Integrity. Vision. Meritide's consultants and software developers provide solutions based on years of real-world experience with a broad range of industries and technologies. Simply put, we know what works!

Leverage our expertise and gain a competitive edge in the marketplace
